

Helix Thready → PenPot import — independent verification

1. Verdict table
2. Timestamped snapshot table (RPC poll, ~90 s cadence)
3. Final per-file state (11:11:13 UTC) vs importer claims
4. RPC evidence (trimmed)
5. Screenshot index (CDP, disposable `chromedp/headless-shell` @ 1440×900, host network, port 9333)
6. Instance anomalies observed
7. Provenance

Independent verification of the PenPot import performed against the live instance at `http://localhost:9001` (PenPot **2.17.0**), authenticated statelessly via `Authorization: Token <token>` against `/api/rpc/command/*`. All numbers below were read **directly from the instance** by this verifier — none are copied from the importer's claims. [VERIFIED — RPC responses captured in `snapshots.jsonl`, 18 snapshots, 10:21–11:11 UTC]

1. Verdict table

Import-plan item	Verdict	Independent evidence
Project structure (project “Helix Thready”, 7 files “01 Foundations” ... “07 Prototypes”)	VERIFIED-PRESENT	<code>get-projects</code> → project <code>6e660a50-7c2a-8049-8008-5d974fe499d1</code> with <code>count: 7</code> ; <code>get-project-files</code> lists all 7 expected names.
Design tokens (W3C DTCG sets/themes)	VERIFIED-PRESENT	Files 01 + 02 each carry <code>data.tokensLib : sets</code> <code>thready-light</code> (19), <code>thready-dark</code> (19), <code>thready-structure</code> (33) = 71 tokens ; themes <code>Thready/Light</code> (active) + <code>Thready/Dark</code> ; <code>\$metadata.activeSets = [thready-structure, thready-light]</code> . Source DTCG file has 74 → 71/74 imported (3 alias/unsupported dropped). Files 03–07 carry no <code>tokensLib</code> (by design).
SVG vectors (editable geometry)	VERIFIED-PRESENT	File 01: 325 objects incl. layer groups <code>token-fan-out</code> , <code>design-area-map</code> , 4 <code>launcher-icon-*</code> , <code>footer-slogan</code> , <code>logo-full</code> , <code>logo-mark</code> (screenshot <code>file-01-foundations.png</code>). File 02: 974 objects incl. <code>components-sheet</code> , <code>component-taxonomy</code> , <code>component-state-lifecycle</code> . File 06: 591 objects. Workspace screenshots show real vector layer trees, not flattened bitmaps.
PNG underlays (2× screen renders as boards)	VERIFIED-PRESENT	File 03: 28 frames /65 objects; file 04: 22 frames /45 objects; file 05: 4 frames/9 objects. Viewer render <code>file-03-screens-web-viewer.png</code> shows the full-fidelity dark <code>web/thread-explorer</code> screen (1 of 28 boards).
Hydration (thumbnails rendered)	PARTIAL	Object thumbnails exist for 6/7 files (<code>get-file-object-thumbnails</code> : 01→2, 02→2, 03→6, 04→2, 05→4, 06→0, 07→2). File-level <code>thumbnailId</code> only on 07. Dashboard (<code>dashboard-recent-final.png</code>) shows rendered card thumbnails for 03+04 but placeholder glyphs for 02+06.

Import-plan item	Verdict	Independent evidence
Prototype interactions/flows (post-import wiring)	VERIFIED-PRESENT (placement differs from claim)	15 interactions total: 12 in file 03, 3 in file 04 (not in “07 Prototypes”, which has 0). 2 flows: <code>web-primary</code> (03, page-level <code>flows</code>) + <code>mobile-primary</code> (04).

2. Timestamped snapshot table (RPC poll, ~90 s cadence)

Total objects = sum over all 7 files, including 1 root frame per page (7 baseline).

UTC time	Total objects	Tokens (Σ files)	Notable state (file: revn)
10:21:25	9	0	Baseline: 7 empty files; 03 revn 1 (2 objects)
10:23:04 – 10:29:04	9	0	Importer preparing; 01 revn 0→2
10:30:35	13	0	01 writing (revn 4)
10:32:05	21	0	01 revn 5
10:36:36	119	0	03 revn 3 (28 frames), 04 revn 1 (22 frames) — PNG underlays landed
10:38:06	127	0	02/05/07 first writes
10:39:37	1,100	0	01 revn 16 (325 obj) — SVG vector burst
10:41:07	2,006	0	02 revn 6 (974 obj), 06 revn 4 (591 obj)
10:51:27	2,006	0*	Post-completion check (*parser missed DTCG shape — fixed)
10:52:27	2,006	142 (71×2)	Corrected parser: tokensLib visible in 01+02
11:11:13 (final)	2,014	142 (71×2)	03 revn 6 (65 obj, interactions), 04 revn 2

3. Final per-file state (11:11:13 UTC) vs importer claims

Importer counts exclude the per-page root frame; mine include it (claimed = mine – 1). All match.

File	id (suffix)	revn	Objects (mine / claimed)	Frames	Token sets / tokens / themes
01 Foundations	...5d9757f5eba9	16	325 / 324 ✓	2	3 / 71 / 2 ✓
02 Components	...5d97583457f7	6	974 / 973 ✓	2	3 / 71 / 2 ✓
03 Screens — Web	...5d975850be0f	6	65 (was 57=56+1 at claim time) ✓	28	—
04 Screens — Mobile	...5d97587fa515	2	45 / 44 ✓	22	—
05 Screens — Desktop + TUI	...5d975891ead1	1	9 / 8 ✓	4	—
06 Platform Overrides	...5d9758a3f0f7	4	591 / 590 ✓	0	—
07 Prototypes	...5d9758b7309a	1	5 / 4 ✓	2	—

No mismatches in object counts. One placement deviation: the claimed “15 interactions, 2 flows” are real but live in files 03 (12 interactions + flow `web-primary`) and 04 (3 interactions + flow `mobile-primary`), not in file 07.

4. RPC evidence (trimmed)

`get-profile` → auth OK: `{"email":"...", "fullname":"Milos Vasic", "defaultTeamId":"15d3067e-...-5d91f2863c25"}`

`get-projects?team-id=15d3067e-...` →

```
[{"id":"6e660a50-7c2a-8049-8008-5d974fe499d1","name":"Helix Thready","count":7},
{"id":"15d3067e-de6d-8170-8008-5d91f287c4e2","name":"Drafts","count":0}]
```

`get-file?id=...eba9` (01 Foundations) → `data.tokensLib` (trimmed):

```
{"thready-light":{"color":{"brand":{"...},"accent":{"...}, ...19 tokens}},
"thready-dark":{"color":{"...19 tokens}},
"thready-structure":{"number":{"...},"dimension":{"...},"fontFamily":{"...} = 33 tokens},
"$themes":[{"group":"Thready","name":"Light","selectedTokenSets":{"thready-structure":"enabled","thready-light":"enabled"}},
{"group":"Thready","name":"Dark","selectedTokenSets":{"thready-structure":"enabled","thready-dark":"enabled"}}],
"$metadata":{"tokenSetOrder":["thready-light","thready-dark","thready-structure"],
"activeThemes":["Thready/Light"],"activeSets":["thready-structure","thready-light"]}}
```

`get-file?id=...be0f` (03) page-level `flows` →

```
{"f4c2d05f-...":{"id":"f4c2d05f-...","name":"web-primary","startingFrame":"70850c94-..."}}
```

Full raw snapshots: `snapshots.jsonl` (18 lines, one JSON snapshot each).

5. Screenshot index (CDP, disposable `chromedp/headless-shell` @ 1440×900, host network, port 9333)

File	Size	What it shows
<code>dashboard.png</code>	156 KB	First dashboard visit post-login; 07 Prototypes card with rendered thumbnail; PenPot onboarding modal partially obscures view (anomaly 2)
<code>dashboard-recent-final.png</code>	210 KB	Final dashboard: “Helix Thready — 7 files”; rendered thumbnails for 03+04, placeholder glyphs for 02+06 (hydration = PARTIAL)
<code>dashboard-project-helix-thready.png</code>	25 KB	Project files view, mid-import (10:41 UTC)
<code>dashboard-project-helix-thready-final.png</code>	6 KB	Failed render — project-files route came up nearly empty in headless capture (anomaly 3); superseded by <code>dashboard-recent-final.png</code>
<code>file-01-foundations.png</code>	80 KB	Workspace: vector layer tree (token-fan-out, design-area-map, launcher icons, logos, motion previews); Thready logo vectors on canvas; TOKENS tab present
<code>file-02-components.png</code>	145 KB	Workspace: components-sheet + taxonomy + lifecycle vectors, light/dark library boards
<code>file-03-screens-web-viewer.png</code>	266 KB	Viewer: full-fidelity dark <code>web/thread-explorer</code> board (1/28) — workspace capture crashed (anomaly 1)
<code>file-04-screens-mobile-viewer.png</code>	133 KB	Viewer: mobile screen board — same workspace-capture fallback
<code>file-05-screens-desktop-tui.png</code>	176 KB	Workspace: desktop + TUI boards rendered
<code>file-06-platform-overrides.png</code>	57 KB	Workspace: platform-override vector content
<code>file-07-prototypes.png</code>	161 KB	Workspace: prototype boards rendered

Tooling kept alongside: `snapshot.py` (RPC poller), `cdp_shots.py` / `cdp_resume.py` (CDP driver), `files.json` (id map), `snapshots.jsonl` (raw evidence).

6. Instance anomalies observed

1. **Page.captureScreenshot** → “Internal error” on the workspace views of files 03 and 04 only (the two files with 28/22 large 2× PNG textures), reproducible across fresh tabs, clip capture, JPEG, and `fromSurface:false`; CDP also hit transient connection timeouts while those pages were rendering. Files 05/06/07 captured fine. Workaround: PenPot **view mode** rendered and captured both files without issue. This is a headless-capture limitation under heavy texture load, not data corruption — the RPC data and viewer renders are complete.
2. **Onboarding modal** (“Help us get to know you”) blocked the first dashboard screenshot; removed from DOM (cosmetic only) for the final captures.
3. **Project-files dashboard route** rendered nearly empty twice in headless capture (`dashboard-project-helix-thready-final.png`, 6 KB); the Recent view was used as hydration evidence instead.
4. **Hydration incomplete at verification close**: file 06 has zero object thumbnails; only file 07 has a file-level `thumbnailId`; dashboard cards for 02+06 show placeholder glyphs. Expected to self-heal as PenPot renders thumbnails lazily on access.
5. **Token count 71 vs 74 source tokens** — 3 source entries (alias/unsupported types, e.g. `--border-soft` → `var(--border)`) did not land as importable DTCG tokens. Matches the importer’s own “71/74” claim; not a regression found by this verifier.
6. No RPC errors, no 5xx, no file-read failures across all 18 snapshots (`fileErrors=0` throughout).

7. Provenance

- Verifier ran **independently** of the importer; no writes were made to any PenPot file — RPC reads (`get-profile`, `get-teams`, `get-projects`, `get-project-files`, `get-team-recent-files`, `get-file`, `get-file-object-thumbnails`) and UI screenshots only. [VERIFIED — command list]
- Disposable browser container `thready-verify-cdp` (image `chromedp/headless-shell`, host network, CDP on 127.0.0.1:9333) — created for this verification and removed afterwards. Neither `helixcode-chromedp` nor `penpot-network` was touched.
- Credentials were read from the gitignored `.penpot-credentials`; no secret values appear in this report or in any evidence file.

Made with love ♥ by Helix Development.
