|-----|------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | 2026-07-22 | swarm (design · platforms) | Initial catalogue: per-platform DEVIATION specs closing the adversarial-review finding (“adequate-but-scattered for Android/iOS, THIN for HarmonyOS/Aurora, MISSING typography substitution everywhere”) — typography-substitution, dedicated HarmonyOS + Aurora specs, React token-rebind remediation contract; minted the <code>THREADY-DES-PLAT-*</code> open-item family |
| 2   | 2026-07-22 | swarm (design · decisions) | <code>THREADY-DES-PLAT-01</code> narrowed per operator ruling (bundling decided — all three faces, all platforms; remaining scope = per-face license/redistribution (OFL) verification); catalogue + family table updated                                                                                                                                                    |

## 1. What this directory is

Per-platform **customization/deviation specs**: the places where a target platform must legitimately diverge from the canonical web realization of the design system, specified once and cross-linked, instead of living as scattered one-liners.

The division of labor with the neighbouring areas is deliberate:

- **library/platform-map.md** maps components — every library component × 8 platform realizations, with per-cell VERIFIED / PROPOSED / ASSUMED markers (§3) and per-component customization notes (§4). It answers “*what* realizes this component on platform X”.

- **This directory** specifies **per-platform deviations** — the platform-wide contracts that cut *across* components: typography substitution, navigation idiom, system-back behavior, safe areas, platform theming interactions (ambience, system dark mode), accessibility API mapping, motion runtime availability, i18n. It answers “*how* platform X as a whole departs from the web baseline, and what must never depart”.
- **screens/\*/README.md** carry **per-screen chrome** — the Android/iOS chrome toggle (status bar, app bar/back pattern, navigation bar, gesture area: mobile README §1), the Tauri per-OS title bar/menus/tray (desktop README §3), the TUI terminal theme ([lipgloss-theme.md](#)). Those stay authoritative for screen-level rendering; this directory never duplicates a screen.

**Android/iOS status.** The adversarial review rated Android/iOS coverage *adequate-but-scattered* (mobile README §1 chrome toggle, wireframes §6.1 a11y/theming table, platform-map §4 notes) — so no dedicated Android/iOS file is authored here; the one Android/iOS hole (typography) is closed by [typography-substitution.md](#), which covers **all** platforms. HarmonyOS and Aurora were rated *THIN* and get dedicated consolidating specs.

## 2. Catalogue

| File                       | Content                                                                                                                                                                                                                                                                                                                                                       | Status                                                                                                                                                                                                    |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| typography-substitution.md | <b>The missing spec:</b> per-platform font strategy for the three brand faces (Space Grotesk / Hanken Grotesk / JetBrains Mono) — bundling feasibility per platform, honest fallback stacks ( <code>[DEFAULT — adjustable]</code> ), Cyrillic coverage discipline (THREADY-DES-04 inherited), dynamic-type / font-scale mapping of the token type ramp        | new spec; bundling <b>decided</b><br><b>2026-07-22</b> — bundle all three faces on all platforms; <code>[OPEN: THREADY-DES-PLAT-01]</code> narrowed to per-face license/redistribution (OFL) verification |
| harmonyos.md               | Dedicated <b>ArkTS / HarmonyOS</b> customization spec: ArkUI navigation of the 5-tab IA, system back, safe areas, system dark mode, Barrier-Free a11y mapping, consolidated ArkUI component-substitutions table, layered icon integration, motion runtime honesty, i18n                                                                                       | design contract; client is a skeleton<br><code>[GAP: 8.5]</code>                                                                                                                                          |
| aurora.md                  | Dedicated <b>Aurora OS / Qt / Silica</b> customization spec: Silica page-stack navigation, remorse-timer pattern for destructive actions, ambience-vs-token tension (documented honestly), Qt Accessibility mapping, component substitutions, density buckets ( <code>THREADY-DES-05</code> inherited), motion honesty, keyboard/hardware back                | design contract; client is a skeleton<br><code>[GAP: 8.5]</code>                                                                                                                                          |
| react-token-rebind.md      | <b>Remediation contract</b> (not a full React spec) for <code>THREADY-DES-LIB-01</code> / <code>[GAP: 8.6]</code> : the verified finding ( <code>Button.tsx</code> hard-codes a Tailwind palette, zero token references), the required re-bind approach (CSS custom properties from <code>tokens.css</code> ), and the acceptance criteria that close the gap | remediation contract                                                                                                                                                                                      |

## 3. Reading order & rules

1. Read `design-system.md` §7 first — the fan-out table and the token-bridge mechanism are the frame every file here hangs on.
2. Then `platform-map.md` §2 (what is actually verified per repo) — the honesty baseline these specs must never overstate.
3. Then the file for your platform. Cross-cutting typography applies to **every** platform.

Non-negotiables that no per-platform deviation may touch (restated from [design-system §6](#) and [opendesign/DESIGN.md](#)):

- **Semantic colors are state, never decoration** — destructive UI is always `--danger`; no platform theme, ambience, or white-label may mask it `[VERIFIED — THEMES.md rule]`.
- **Parity contract** — identical interaction states + all semantics on every platform, enforced by the `ScreenDiff / VisualRegression` bank once CI lands `[GAP: 9.3]` (wireframes §6.1).
- **Tokens are the single upstream** — every platform consumes a *generated* binding, never a hand-kept copy (design-system §7).

## 4. Open items (family index)

---

The `THREADY-DES-PLAT-*` family minted by this directory; each is owned by the file that mints it and registered in the canonical `../index.md` registry:

| ID                      | Summary                                                                                                                                                                                           | Owning file                   |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| THREADY-DES-<br>PLAT-01 | <b>Narrowed 2026-07-22</b> — bundling decided (bundle all three faces on all platforms; fallbacks are runtime-failure only); remaining: per-face <b>license/redistribution (OFL) verification</b> | typography-substitution.md §7 |
| THREADY-DES-<br>PLAT-02 | <b>Fallback-stack Cyrillic</b> (ru / sr-Cyrl) coverage verification per OS face                                                                                                                   | typography-substitution.md §7 |
| THREADY-DES-<br>PLAT-03 | <b>ArkUI API verification</b> of every derived HarmonyOS mapping (navigation, components, font registration, Barrier-Free)                                                                        | harmonyos.md §11              |
| THREADY-DES-<br>PLAT-04 | <b>HarmonyOS motion runtime</b> — no verified Lottie player; @ohos/lottie is ASSUMED                                                                                                              | harmonyos.md §11              |
| THREADY-DES-<br>PLAT-05 | <b>Silica/Qt API verification</b> of every derived Aurora mapping (remorse timer, Silica components, Qt Multimedia)                                                                               | aurora.md §10                 |
| THREADY-DES-<br>PLAT-06 | <b>Aurora motion runtime</b> — no verified Lottie player; Qt-native animation fallback decision                                                                                                   | aurora.md §10                 |
| THREADY-DES-<br>PLAT-07 | <b>Ambience-vs-token policy</b> — final rule for what (if anything) Silica ambience may tint                                                                                                      | aurora.md §10                 |
| THREADY-DES-<br>PLAT-08 | <b>Dynamic-type clamp matrix</b> — max font-scale each platform must survive against the token ramp                                                                                               | typography-substitution.md §7 |
