

Helix Thready — Mobile Screen Designs

- 1. What this directory is
- 2. Catalogue
- 3. Conventions the artifacts follow
- 4. Open items

Rev	Date	Author	Change
1	2026-07-22	swarm (design · screens)	Initial catalogue: 7 device-framed screen artifacts (390×844), Android/iOS chrome toggle, HarmonyOS/Aurora port notes, light+dark
2	2026-07-22	swarm (design · screens)	+4 artifacts closing the \$6 IA gaps: Channels tab root, Add-Channel bottom sheet, Assets grid, full-screen Media viewer; \$6 coverage reconciled; minted <code>THREADY-DES-SCR-MOB-01/-02/-03</code>
3	2026-07-22	swarm (design · decisions)	Operator ruling on <code>THREADY-DES-SCR-MOB-03</code> : the WhatsApp adapter is a committed roadmap item ; the tile stays disabled until the adapter exists; item re-scoped to the <code>WA_*</code> source-contract design

1. What this directory is

Device-framed, **self-contained HTML artifacts** (no CDNs, no external assets — 11 screens) rendering the Thready mobile screens at **390×844 in a rounded phone bezel**, populated with the exact realistic fixture data used across the design docs (channels `#ml-papers` / `#films` / `Max: dev-notes`, the diffusion-paper thread, the download-63% pipeline, `alice@acme.io` / `bob@...` RBAC rows, 128 channels / 1,204 posts / 17 processing / 42.1 TB stats). They are the **mid-fidelity realization** of the mobile wireframes (`wireframes.md` §6); the low-fi structural contract stays authoritative, and high-fi Figma work remains in `prototypes.md` [`OPEN: THREADY-DES-09`].

Every artifact:

- **Inlines the Thready tokens verbatim** from design-system.md §3.1/§3.2 (`#B6E376` brand, `#446E12` / `#ABDDC9` / `#B7EBD6` accents, `#020817` / `#F8FAFC` fg, `#475569` / `#94A3B8` neutrals; Space Grotesk / Hanken Grotesk / JetBrains Mono **with system fallbacks only** — fonts are not embedded, matching the no-CDN/self-hosting posture).
- Supports **light + dark** via the exact shipped mechanism: `@media (prefers-color-scheme: dark)` default + explicit `:root[data-theme="dark"]` override (theming.md §2), with a Light/System/Dark control on the page.
- Carries an **Android (Material 3 / Compose) ↔ iOS (SwiftUI) chrome toggle** switching status bar (punch-hole vs. Dynamic Island), app-bar/back pattern (← + predictive back vs. `< Title` + edge swipe), navigation bar (M3 80dp pill-indicator bar vs. 49pt tab bar + home indicator), and gesture area.
- Documents **HarmonyOS (ArkTS)** and **Aurora OS (Qt Quick)** as **native ports of the same layouts** in a per-screen notes panel — both clients are `helix_shims skeletons [GAP: 8.5]`; the notes never claim they are build-ready.

2. Catalogue

File	Screen	Ground truth	Status
home-feed.html	Home tab — live activity + processing status + recent threads	wireframes \$6 (Home), \$3.3 (data), ux-flows \$3 (events)	grounded
channels.html	Channels tab root — subscribed-channels list, per-channel state chips (healthy / syncing / △ auth / paused), M3 FAB vs. iOS nav-bar add action	wireframes \$6 (T2 → CHLIST), \$3.4 (row contract), \$6.2 (gestures)	grounded; unread pills [OPEN: THREADY-DES-SCR-MOB-01]
add-channel.html	Add-Channel bottom sheet — source picker, account/sign-in, link + Resolve with hint/error/processing states, step gating	wireframes \$6 (CHLIST → CHADD), \$3.4 (wizard + validation table), \$1.3; ux-flows \$2/\$2.1	grounded; Max [GAP: 5.1] ; WhatsApp roadmap-committed (2026-07-22), tile disabled ([OPEN: THREADY-DES-SCR-MOB-03] — WA_* contract)
channel-threads.html	Channel detail — thread list (complete posts)	wireframes \$3.5 + \$6, \$6.2 gestures	grounded
post-detail.html	Post detail — tags, replies, pipeline, assets, Reprocess	wireframes \$3.6 + \$6; ux-flows \$3/\$3.1	grounded
search.html	Search — semantic/keyword/hybrid, scope, scored results	wireframes \$3.7 + \$6; ux-flows \$4	grounded
assets-grid.html	Assets tab root — masonry media grid with type badges, filter chips, empty-state variant	wireframes \$6 (T4 → ASSETS), \$3.8 (library vocabulary), \$1.1 (empty), \$6.2	grounded
media-viewer.html	Full-screen media player / asset viewer — video / image-zoom / audio-waveform / doc variants + pipeline-provenance overlay	wireframes \$6 (POST → PLAYER , ASSETS → PLAYER), \$3.8 (stream Range/HLS), \$3.6, \$6.2 (zoom)	grounded; share/save-to-device [OPEN: THREADY-DES-SCR-MOB-02]
notifications.html	Notifications centre over Event Bus events	derived — events are ground truth (ux-flows \$2/\$3); the surface is not in the \$6 tab map	[OPEN: THREADY-DES-15]
account.html		wireframes \$6 (More) + \$3.10; ux-flows \$5	grounded

File	Screen	Ground truth	Status
	Account — profile, multi-Account switcher, RBAC admin, sign out		
settings.html	Settings — theme/language, effective branding, messengers, security	wireframes \$6 + \$3.11; theming \$2/\$8	grounded

Coverage vs. the \$6 IA (reconciled, Rev 2). Every node of the wireframes \$6 navigation map now has an artifact: Home → **home-feed**; Channels → **channels** → **add-channel** sheet / **channel-threads** → **post-detail** → **media-viewer**; Search → **search**; Assets → **assets-grid** → **media-viewer**; More → **account** / **settings**. Nothing promised by \$6 is missing on disk. The one surface **beyond** \$6 remains **notifications.html**, a derived proposal `[OPEN: THREASY-DES-15]`.

3. Conventions the artifacts follow

- **Never fake:** every stub/scaffold dependency is flagged on-screen or in the notes panel — Max adapter `[GAP: 5.1]`, dispatch engine `[GAP: 4.1]`, MeTube webhook `[GAP: 6.5]`, OCR `[GAP: 2.6]`, HashEmbedder `[GAP: 2.1]` (search shows the mandated degraded banner), `Security-KMP` secure-storage stub `[GAP: 7.3]` and `UI-Components-KMP` `[GAP: 8.4]` (both **mobile release gates**, wireframes \$6.2).
- **Interaction states** follow the uniform legend of wireframes \$1.1 (default / loading / skeleton / empty / error / disabled / success); artifacts render the *default* state and annotate the others inline where a screen has a notable one (offline freeze, degraded search, 409 “already running”).
- **Errors are** `--danger`, **never** `--accent`; indirect (AI-derived) tags render dashed vs. solid direct hashtags; the Helix Development attribution is locked where it appears.
- Bezel/status-bar cosmetics (clock values `14:02` / `9:41`, battery glyphs, island/punch-hole dimensions) are illustrative chrome, `[DEFAULT — adjustable]` — not token-governed.

4. Open items

- `[OPEN: THREASY-DES-15]` — **Notifications centre:** confirm whether mobile gets a dedicated notifications surface (and push delivery preferences) or stays with the Home live feed only; the wireframes \$6 IA does not include one. Until decided, **notifications.html** is a derived proposal over the verified event contract.
- `[OPEN: THREASY-DES-04]` — Cyrillic subsets (ru / sr-Cyrl) of the three faces; affects every screen’s text rendering.
- `[OPEN: THREASY-DES-06]` — whether Account Admins may edit their own branding; settings.html keeps branding read-only on mobile until resolved.

- `[OPEN: THREADY-DES-09]` — high-fidelity Figma frames refine these artifacts in `prototypes.md`.
- `[OPEN: THREADY-DES-SCR-MOB-01]` — **unread “N new” pills** on the Channels list rows (`channels.html`) are not in the §6/§3.4 ground truth; they are a `[DEFAULT — adjustable]` proposal derived from `post.received` events since last visit. Confirm whether mobile shows unread counts at all, and the reset rule (on open vs. on scroll-past).
- `[OPEN: THREADY-DES-SCR-MOB-02]` — **media viewer**  **Share** /  **Save-to-device** (`media-viewer.html`): no ground-truth export path exists — §3.8’s “re-download” is a server-side re-fetch for broken links, and the desktop precedent (`[OPEN: THREADY-DES-16]` , `desktop README §3.4`) already left local-media paths undecided. Both actions are specified disabled until product resolves the export path.
- `[OPEN: THREADY-DES-SCR-MOB-03]` — **WhatsApp as a third Add-Channel source — decided: roadmap-committed** (operator ruling 2026-07-22). The WhatsApp adapter is now a **committed roadmap item**, no longer an open question of *whether*. The tile in `add-channel.html` **stays disabled until the adapter exists** — WhatsApp remains absent from the verified source set today (wireframes §3.4: Telegram/Max; ux-flows §2 env contract `TG_*` / `MAX_*`) and is never shown as selectable. Remaining tracked work under this ID: design the `WA_*` **source contract** (env-contract shape mirroring `TG_*` / `MAX_*` , wizard states, auth flow) so the tile can light up when the adapter lands.

Made with love ♥ by Helix Development.
