

Helix Thready — Design Package Audit & Sign-off Report

Table of contents

1. Verdict summary

2. Package inventory (file counts + sizes)

3. Mandate-by-mandate checklist

4. Per-platform coverage matrix

5. Truth spot-checks performed

6. Defect found & patched

7. Operator-action list (honest deferrals)

8. Readiness statement

Rev	Date	Author	Change
1	2026-07-22	swarm (design · final package critic)	Final audit + sign-off: mandate-by-mandate verdict against the original request \$Design / \$Launcher-icon / \$Branding and [CONSTITUTION §11.4.162 / §11.4.190] ; truth spot-checks (screens self-contained + tokens inline; tokens.css ↔ design-system.md; 6 Lottie parse; 28 Figma IR captures non-empty); one real defect patched (exports/README.md figma-capture count 22→28); per-platform coverage matrix; operator-action list; readiness statement

This is the **sign-off report** for the Helix Thready MVP visual design package under docs/public/research/mvp/design/ (DESIGN). It audits the package **mandate-by-mandate** against the authoritative request and the Constitution, records the **VERIFIED vs ASSUMED** evidence for each claim, lists the honest **operator hand-off actions**, and states readiness. It follows ../CONVENTIONS.md. Every count below was observed on disk on 2026-07-22.

Table of contents

- 1. Verdict summary
- 2. Package inventory (file counts + sizes)
- 3. Mandate-by-mandate checklist
- 4. Per-platform coverage matrix
- 5. Truth spot-checks performed
- 6. Defect found & patched
- 7. Operator-action list (honest deferrals)
- 8. Readiness statement

1. Verdict summary

- **Mandates audited:** 18.
- **SATISFIED (deliverable on disk, usable now):** 16.
- **SATISFIED on disk with a DEFERRED cloud hand-off tail (operator-only):** 2 — the **hosted Figma file** and the **hosted PenPot project**. Both *export formats* are produced and import-ready on disk; only the act of importing them into a cloud tenant is deferred, because this environment has **no Figma/PenPot token** and the OpenDesign Figma-import plugin pins `networkAccess:none`.
- **Mandate-level failures (nothing delivered):** 0.
- **Operator hand-off actions outstanding:** 3 (Figma cloud import, PenPot import, font install/embedding) — \$7.
- **Real defects found and patched in place:** 1 (`exports/README.md` under-counted the Figma IR captures as 22; the true, independently re-verified count is 28 / 11 291 nodes) — \$6.

Nothing in this report claims a cloud push occurred. Every “produced” claim is backed by an on-disk artifact and a check recorded in \$5.

2. Package inventory (file counts + sizes)

Totals: **270 files**, **≈84 MB** under `design/` (the bulk is `exports/` PNG/PDF binaries).

Area	Path	Files	Size	Contents (VERIFIED)
OpenDesign contract	<code>opendesign/</code>	3	60 KB	<code>DESIGN.md</code> (9-section brand contract), <code>tokens.css</code> (light + dark, 208 lines), <code>TOOLING.md</code>
Screens (rendered HTML)	<code>screens/</code>	36	1.2 MB	30 HTML : web 14 (13 screens + interactive <code>index.html</code>), mobile 11, desktop 1, TUI 1, marketing 3; + 5 READMEs + <code>lipgloss-theme.md</code>
Component library	<code>library/</code>	6	220 KB	<code>components.html</code> (living library, all states × light/dark), <code>components-sheet.svg</code> , <code>platform-map.md</code> (×8 platforms), README, <code>diagrams/</code>
Motion (Lottie)	<code>motion/</code>	17	548 KB	6 Lottie .json + 6 static reduced-motion SVG fallbacks + <code>preview.html</code> (self-contained) + <code>motion.md</code> + <code>motion-manifest.json</code> + README + <code>diagrams/</code>
Brand assets	<code>assets/</code>	12	424 KB	7 SVG masters (launcher icon ×4, logo-mark, logo-full, footer-slogan) + <code>icon-export-matrix.{md,html,pdf}</code> + <code>generate-raster.sh</code> + <code>icon-export-fanout.mmd</code>
Diagrams	<code>diagrams/</code>	34	676 KB	17 .mmd + 17 rendered .svg pairs (area map, token fan-out, journey flows, IA/nav, export pipelines, lifecycle)
Figma import kit	<code>figma/</code>	3	72 KB	<code>figma-variables.json</code> (tokens as Figma Variables), <code>figma-file-plan.md</code> (8-page blueprint), README
Export package	<code>exports/</code>	132	77 MB	49 screen PNG (light+dark, 2×) · <code>design-book.pdf</code> (54 pp) · PenPot (16 SVG + 22 PNG + IMPORT.md) · Figma (28 <code>.od-figma.json</code> IR + 8 SVG + manifest + IMPORT.md) · <code>pdf-build/</code> + <code>scripts</code> outputs
Root spec docs	<code>design/</code> <code>*.md</code> (+ <code>.html/.pdf</code> twins)	24	—	<code>index.md</code> , <code>design-system.md</code> , <code>wireframes.md</code> , <code>ux-flows.md</code> , <code>component-library.md</code> , <code>theming.md</code> , <code>brand-assets.md</code> , <code>prototypes.md</code> , this report
Scripts	<code>scripts/</code>	3	48 KB	<code>render-cdp.mjs</code> (PNG + Figma IR), <code>build-book.mjs</code> (PDF), <code>capture-figma.mjs</code>

3. Mandate-by-mandate checklist

Source of mandates: original request §Design (L180–188), §Launcher-icon (L204), §Branding (L398–415), and the decision matrix `[CONSTITUTION §11.4.162]` (OpenDesign source, tokens, light+dark, per-platform variants, visual-regression) / `[§11.4.190]` (website engineering quality).

#	Mandate (verbatim intent)	Verdict	Concrete artifact / evidence
1	Full Figma design for every visual client	SATISFIED* (cloud tail deferred)	28 genuine <code>.od-figma.json</code> IR captures (11 291 nodes, all parse, IR v1, <code>{version,source,fonts,root}</code>) produced by OpenDesign's own <code>clipper/capture.js</code> + <code>figma/figma-variables.json</code> + 8-page file plan + <code>exports/figma/IMPORT.md</code> . Hosted <code>.fig</code> = operator import (\$7).
2	Wireframes for every surface	SATISFIED	<code>wireframes.md</code> (web IA + screens, CLI tree, TUI layouts, mobile) — monospace blocks + Mermaid + prose; realized by the rendered <code>screens/</code> sets
3	UI/UX diagrams & schemes	SATISFIED	<code>diagrams/</code> 17 <code>.mmd</code> + <code>.svg</code> pairs; <code>ux-flows.md</code> four key journeys as flow/sequence diagrams with states/errors/event hooks
4	Interactive prototype	SATISFIED	<code>screens/web/index.html</code> — journey-walking shell embedding the live screens; all 14 sibling links resolve (0 broken)
5	Non-interactive prototype	SATISFIED	<code>exports/png/</code> 49 renders (light+dark, 2×) + <code>exports/design-book.pdf</code> 54 pp (<code>pdfinfo</code> → 54)
6	PenPot export	SATISFIED* (cloud tail deferred)	<code>exports/penpot/</code> — 16 vector SVG + 22 screen PNG + <code>IMPORT.md</code> (native-vs-raster boundary stated). Hosted PenPot project = operator import (\$7)
7	PDF export	SATISFIED	<code>exports/design-book.pdf</code> — valid PDF 1.7, 54 pages , 31 MB (multi-page + >1 MB checks pass)
8	PNG export (all sizes)	SATISFIED	Screens: 49 PNG light+dark @2× (>5 KB + non-blank stddev, 0 failures). Icons: 7 vector masters + <code>assets/generate-raster.sh</code> emits the full per-OS pixel matrix on demand (<code>icon-export-matrix.md</code>)
9	Lottie animations	SATISFIED	6 Lottie <code>.json</code> (<code>helix-spinner</code> , <code>thread-sync</code> , <code>processing-pulse</code> , <code>success-check</code> , <code>error-cross</code> , <code>transition-fade-slide</code>) — all parse, bodymovin v5.7.4 , 2–5 layers each; + 6 static reduced-motion fallbacks + <code>motion-manifest.json</code> v2
10	Stunning transition effects	SATISFIED	<code>motion/transition-fade-slide.json</code> + <code>motion.md</code> transition spec + self-contained <code>motion/preview.html</code> (vendored lottie-web, zero network)

#	Mandate (verbatim intent)	Verdict	Concrete artifact / evidence
1 1	Full forms validation + hints	SATISFIED	Verified in <code>screens/web/login.html</code> (21 hits), <code>screens/web/settings.html</code> (17), <code>screens/mobile/add-channel.html</code> (12): <code>required</code> , <code>aria-invalid</code> , <code>aria-describedby</code> , <code>error/hint</code> patterns; contracts in <code>wireframes.md §1.3</code>
1 2	Unique design exclusive to Thready	SATISFIED	<code>opendesign/DESIGN.md</code> bespoke brand contract; theme eyedrop-derived from <code>assets/Logo.png</code> (<code>--brand #B6E376</code> , <code>--brand-2 #ABDDC9</code>); not a stock template
1 3	White-labeling per account	SATISFIED	<code>theming.md</code> (per-account model, DDL, runtime CSS-var injection) + <code>screens/web/settings.html</code> branding editor; Root-configurable colors/logo/slogan
1 4	Light + dark everywhere	SATISFIED	<code>opendesign/tokens.css</code> 3 sanctioned mechanisms (<code>prefers-color-scheme</code> + <code>[data-theme="dark"]</code> + <code>[data-theme="light"]</code>); every screen + the 24 dark-theme PNG renders
1 5	Launcher icon: no letters, helix element	SATISFIED	<code>assets/launcher-icon{-dark,-light,-mono}.svg</code> — 0 <text> elements (grep-verified), helix/spiral path present; vector masters, light/dark/mono, transparent bg
1 6	“Made with ♥ by Helix Development” slogan	SATISFIED	<code>assets/footer-slogan.svg</code> (heart glyph + “Helix Development”) + every doc footer; heart tinted via <code>--ds-heart</code> / <code>--accent-ink</code> token
1 7	OpenDesign-authored	SATISFIED	<code>opendesign/DESIGN.md</code> in the verified 9-section OpenDesign schema + <code>tokens.css</code> machine twin. (Token→Figma <i>plugin</i> sync is <code>[ASSUMPTION]</code> ; the <code>tokens.json</code> →Figma-Variables fallback is source-confirmed — <code>prototypes.md §2</code>)
1 8	Versioned like all documentation	SATISFIED	Every <code>.md</code> carries the CONVENTIONS metadata header + revision-history table; export artifacts carry manifests (<code>capture-manifest.json</code> , <code>render-report.json</code> , <code>motion-manifest.json</code>)

***** = deliverable is complete and import-ready **on disk**; only the cloud materialization is an operator hand-off (§7). It is **not** a gap in the design work.

4. Per-platform coverage matrix

Legend: **full** (implementation-ready) · **design** (design-depth artifact present) · **notes** (port mapping / notes only, native client is a tracked SCAFFOLD) · — n/a.

Capability	Web	Desktop (Tauri 2)	Mobile · Android	Mobile · iOS	Mobile · Harmony OS	Mobile · Aurora	TUI
Wireframes	■	■ ·			·	·	■
Rendered screens (HTML)	13+proto ■	· shell	· 11 (Android chrome)	· 11 (iOS chrome)	· port notes	· port notes	10 mockups ■
Tokens / theme	■ CSS+Ang ular	■ (web tokens)	■ · Compose map	· SwiftUI map	· ArkTS map	· Qt/ Aurora map	■ Lipgloss (verified)
Component variants	■	■ ·	■ ·	■ ·	·	·	■
Light + dark	■	■	■	■	(token- level)	(token- level)	■
PNG render (L+D, 2×)	■			(shared)	—	—	
Figma IR capture				(shared)	—	—	
Interactive prototype		via web	·	·	·	·	—

Honest notes. Web and TUI are the deepest surfaces (per the operator’s **Web + CLI first** decision), and the TUI Lipgloss pattern + keymap are **VERIFIED against real source** (`helix_track/llms_verifier/.../tui`). Desktop is design-depth as a wrapped-web shell; whether it needs native screens beyond the wrapper is `[OPEN: THREADY-DES-08]`. Android/iOS share the rendered mobile set (chrome toggle) with native realization mapped (Compose/SwiftUI). **HarmonyOS and Aurora** have token/port mapping only — their native clients are tracked SCAFFOLDS (`[GAP: 8.5 helix_shims]`), and Aurora density buckets are `[OPEN: THREADY-DES-05, RESEARCH]`. These are pre-existing, already-tracked scope boundaries, not new gaps.

5. Truth spot-checks performed

Every check below was executed against the on-disk files during this audit.

- **Screens self-contained + brand tokens inline** — VERIFIED. `dashboard.html`, `login.html`, `home-feed.html`, `desktop-shell.html`, `settings.html`: **no external asset loads** (the only `https://...` strings are *displayed post-URL text*, e.g. `youtu.be/dQw4...`; the one `<iframe>` in `index.html`

embeds a **local** sibling screen). Each inlines the verified brand values (`#B6E376` , `#446E12` , `#ABDDC9`), uses `--brand*` custom properties, and ships `data-theme` + `prefers-color-scheme` for light+dark.

- **tokens.css light+dark ↔ design-system.md** — VERIFIED. Both carry `--brand #B6E376 / --brand-2 #ABDDC9 / --accent #446E12` (light) with the dark rebind to `#B6E376` accent / `#B7EBD6` brand-2; all three theme mechanisms present in both.
- **6 Lottie JSON parse** — VERIFIED. All six load as JSON, bodymovin `v=5.7.4` , non-zero `op` /layers; the 7th `motion-manifest.json` is a runtime manifest (not a Lottie), correctly shaped.
- **Figma captures are non-empty IR** — VERIFIED. 28 files, each `{version,source,fonts,root}` with a populated node tree (165–1356 nodes/screen); total **11 291 nodes** re-summed independently and **equal** to `capture-manifest.json`’s `perPage` nodeCount sum; `errors:[]` in the render report.
- **Launcher icon has no letters + helix element** — VERIFIED (`grep -c '<text>' = 0`; spiral/helix path present in all 4 variants).
- **PDF validity** — VERIFIED (`pdfinfo` → PDF 1.7, 54 pages, 31 MB).
- **PNG set** — VERIFIED (49 = 25 light + 24 dark; the single-theme extra is `motion/preview.png`).

6. Defect found & patched

One real defect, patched in place inside DESIGN (no other file touched by the fix):

- **exports/README.md under-counted the Figma IR captures.** It stated **22** genuine `.od-figma.json` captures (“7 561 nodes”), but the capture set was later extended and the disk + the authoritative `exports/figma/capture-manifest.json` both hold **28** captures (**11 291** nodes). The 6 additions — `web-index` , `library-components` , and the 4 remaining mobile screens `add-channel` / `assets-grid` / `channels` / `media-viewer` — were each verified as genuine IR (165–1304 nodes, `{version,source,fonts,root}`) before patching.
 - **Fix:** corrected the four stale “22”/node-count statements (format table, \$5 bullet, scripts table) to **28 / 11 291**, and added a rev-2 row to `exports/README.md` documenting the correction. `exports/figma/IMPORT.md` already said 28 (rev 2) — it was consistent and left as-is.

No fabricated or blank artifacts were found; no other counts were off.

7. Operator-action list (honest deferrals)

These require systems or credentials **not present in this environment**. They are hand-off steps, not design gaps — all source material is on disk.

1. **Figma cloud import (hosted `.fig`)**. Run the OpenDesign **Figma-import desktop-app plugin** on the 28 `.od-figma.json` captures (+ `figma/figma-variables.json`) per `exports/figma/IMPORT.md` . Deferred because: the plugin pins `networkAccess:none` , there is **no Figma token** here, and a native `.fig` cannot be produced outside the Figma app. No cloud push was attempted or claimed.

2. **PenPot import (hosted project).** Import the `exports/penpot/` SVG + PNG bundle into a PenPot instance per `exports/penpot/IMPORT.md`. Deferred because: no PenPot token/instance in this environment.
3. **Font install / embedding.** Screens and exports reference the brand faces by family (`Space Grotesk`, `Hanken Grotesk`, `JetBrains Mono`) with a **graceful `system-ui` fallback stack** — there is **no `@font-face` embed or subset** in the artifacts. For pixel-exact brand rendering (and fully self-contained PDF/portable HTML), the operator should install the variable faces on the render host or embed/subset them into the export pipeline. Rendering does not break without them; only typographic fidelity falls back.

Related **already-tracked** open items (owned by `index.md`, not new): `THREADY-DES-02` (PenPot/Lottie bridges), `THREADY-DES-FIG-01` (the hosted Figma file), `THREADY-DES-05` (Aurora density, RESEARCH), `THREADY-DES-08` (desktop native scope), plus the mobile SCAFFOLD gaps (`8.4/8.5`) and the visual-regression CI gap (`9.3`).

8. Readiness statement

The Helix Thready MVP design package is **complete and internally consistent at the artifact level, and ready for hand-off**: all 18 design mandates are satisfied on disk — a bespoke OpenDesign brand contract with light+dark tokens, 30 rendered self-contained screens across web/mobile/desktop/TUI/ marketing, an interactive prototype plus a non-interactive PNG/PDF set, a living component library, a six-animation Lottie motion package with transition effects, a letterless helix launcher icon and the “Made with ♥ by Helix Development” slogan, per-account white-labeling, and genuine Figma-IR + PenPot export bundles — every count in this report VERIFIED on disk, with one real documentation defect (a stale 22→28 Figma-capture count) found and patched. What remains is **not design work** but three environment-bound operator hand-offs (Figma cloud import, PenPot import, font install/embed) and the previously-tracked implementation-side scaffolds (HarmonyOS/Aurora native clients, KMP/visual- regression CI), all honestly recorded here and in `index.md`. On that basis the package is **signed off for the MVP documentation milestone**, pending the operator hand-off actions in §7.

Made with love ♥ by Helix Development.
