Rev	Date	Author	Change
1	2026-07-22	swarm (design · screens)	Initial catalogue: styled terminal mockups (5 screens) + Lipgloss theme mapping
2	2026-07-22	swarm (design · screens)	Gap closure vs. wireframes §5: +5 screens (Login, Channel detail, Add-Channel form, Assets, Skills) + in-artifact screen index; minted THREADY-DES-TUI-01/-02

1. What this directory is

The Thready TUI is **Bubble Tea + Cobra + Lipgloss**, structured after the **verified in-house pattern** `helix_track/llms_verifier/llm-verifier/tui` (app model → screen models → Lipgloss-styled views + notifications/live pane) `[VERIFIED — wireframes.md §5]`. This directory holds the styled visual realization of the TUI wireframes:

- **tui-screens.html** — a self-contained artifact (no CDNs) rendering ten 80-column terminal mockups in monospace with an **ANSI-16 palette mapped from the brand tokens**: exact box-drawing alignment, Bubble Tea composition labels (**list + viewport + statusbar** per screen, plus textinput/choice/spinner/progress where a screen is a form), the verified keybinding rail (wireframes §5.1), and realistic Thready data (`#ml-papers / #films / Max auth-warning, download 63 %, scores 0.94/0.91/0.88`). The full §5 state machine is now covered (Login through Skills); an in-artifact index links every screen. Page chrome supports light + dark via `[data-theme="dark"]`; the terminal surface stays on the dark palette — “the TUI defaults to the terminal’s dark surface” (design-system §7).
- **lipgloss-theme.md** — the normative brand-token → `lipgloss.Color` mapping (truecolor → ANSI-256 → ANSI-16), role styles re-binding the verified llm-verifier style roles to tokens, `CompleteColor / AdaptiveColor` options — every value marked **VERIFIED** vs **ASSUMED**.

2. Catalogue

Screen (in tui-screens.html)	Bubble Tea composition	Ground truth	Status
1 · Dashboard	key-hint rail + live viewport (WS/SSE) + threads list + statusbar	wireframes \$5 layout, \$5.1 keys	grounded
2 · Channels	list (inverse-accent selection) + statusbar	wireframes \$3.4 data re-laid; \$5 nav state machine	grounded
3 · Thread view (Post detail)	root header + pipeline/replies viewports + statusbar	wireframes \$5.3; ux-flows \$3.1 (409 idempotent retry)	grounded
4 · Search	textinput + mode/scope + scored list + statusbar	wireframes \$5.3; ux-flows \$4 (degraded-embedder banner)	grounded
5 · Processing queue	job list with progress cells + statusbar	derived — Dashboard queue pane (\$3.3) + processing-event contract; the \$5 wireframes fold the queue into the Dashboard	[DEFAULT T — adjustable]
6 · Login	textinput ×2 (endpoint/token) + auth-mode choice + spinner + statusbar	wireframes \$5 (Login → Dashboard); token/config from CLI \$4.1 (THREADY_ENDPOINT / THREADY_TOKEN , keychain-first); pending/failure machine mirrors ux-flows \$2.1	grounded; device-code option [OPEN: THREADY-DES-TUI-02]
7 · Channel detail	list (threads, ● unread) + viewport (scroll rule) + statusbar	wireframes \$5.3 + \$3.5 (thread list re-laid); header state chip per \$3.4; Max △ auth-warning variant	grounded; Max adapter [GAP: 5.1]
8 · Add-Channel form	horizontal choice (platform) + textinput ×2 + progress + statusbar	wireframes \$3.4 five-step wizard as a TUI prompt sequence; ux-flows \$2 journey + status-code table; instructive inline validation (§1.3)	grounded; Max path [GAP: 5.1]
9 · Assets		wireframes \$3.8 re-laid; Asset-Service-	grounded; inline

Screen (in tui-screens.html)	Bubble Tea composition	Ground truth	Status
	list (type/name/size/source table, inverse-accent selection) + preview viewport + statusbar	only links (§7.1); Selected style per lipgloss-theme §4	preview [OPEN: THREADY-DES-TUI-01]
10 · Skills	list ([x] / [] toggle) + detail viewport + statusbar	wireframes §3.9 + the web skills-manager vocabulary (atomic → composite → umbrella; Research v3 / Movies v5 / Notes v1)	grounded; engine [GAP: 4.1], OCR [GAP: 2.6]

3. Conventions the artifacts follow

- **Keys are the verified map** (wireframes §5.1: `ctrl+c/q`, `1-4 / F1-F4`, `h/l`, `tab`, `j/k`, `enter/space`, `f / /`, `r/R`, `esc`, `?`), with the Thready domain keys (`c/a/k/n/p`) layered non-collidingly; every key is echoed in the statusbar/help rail.
- **Honesty is rendered, not footnoted:** the Max channel shows its `△` auth stub state `[GAP: 5.1]`; Search renders the mandated HashEmbedder degradation banner with scores hidden `[GAP: 2.1]`; the failed queue job shows the max-5-retries dead-letter and the idempotent `[r]etry` (second press → `409 already running`, ux-flows §3.1).
- **Palette provenance:** all hex values are the verified `thready.css` dark tokens; all ANSI-16 index picks are ASSUMED nearest-color mappings pending terminal verification (`[OPEN: THREADY-DES-17]`, see lipgloss-theme.md §5/§8).
- The footer `♥` is `U+2665` tinted with the Lipgloss `Accent` (brand-assets §8); the Helix Development attribution line is locked.

4. Open items

- `[OPEN: THREADY-DES-17]` — ANSI degradation decisions (pinned `CompleteColor` vs automatic; border glyph color; optional light-terminal adaptive palette) — details in lipgloss-theme.md §8.
- `[OPEN: THREADY-DES-TUI-01]` — **inline asset preview** (screen 9): terminal image/video rendering is protocol-dependent (kitty graphics / iTerm2 inline images / sixel) and absent on plain terminals; decide whether the preview pane renders pixels where the protocol allows or stays metadata + open/stream everywhere. The mockup ships the honest metadata-only stub.
- `[OPEN: THREADY-DES-TUI-02]` — **TUI sign-in method** (screen 6): ground truth pins the scoped-token path (CLI §4.1 `THREADY_TOKEN`/keychain); the device-code frame is a proposed interactive option

mirroring the ux-flows §2.1 pending/failure machine — confirm with the product whether it ships or the TUI stays token-only.

- The dedicated **Processing queue** screen is a derived composition (`[DEFAULT — adjustable]`); confirm with the product whether it ships as its own screen or stays folded into the Dashboard.
- The palette **generator** (tokens → Go) is a tracked workable item of the design-system area (THREADY-DES-DS-01 / token-bridge, design-system §9); nothing here claims it exists yet.
